

The background is a solid dark green color. In the top right and bottom left corners, there are faint, stylized illustrations of monstera leaves in a lighter shade of green. The leaves have characteristic splits and holes.

PLANT CATALOGUE

MUSEO LARCO

ADIANTUM CAPILLUS-VENERIS

Smaller fern with medicinal properties related to the respiratory system. Recognized for its spinel shaped like lobulated deltas and its dark-colored stem. It grows commonly in moist and low-light places such as wells and fountains.

Detail

**Common name:**

-Southern Maiden hair
-Venus hair fern

**Scientific Name:**

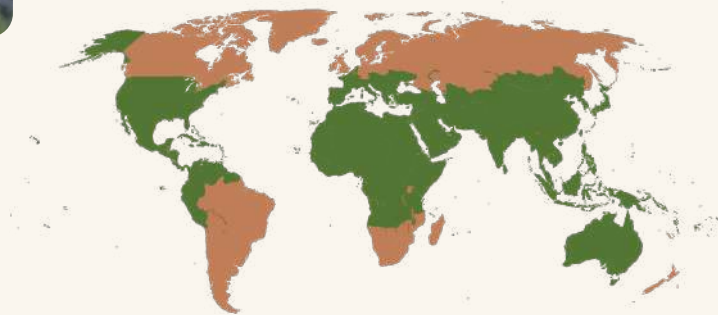

Adiantum
capillus-veneris

**Family:**

Pteridaceae

Origin / Region: Tropical and subtropical zones

AECHMEA FASCIATA

Slow-growing ornamental plant, whose leaves are deep green with white spots that appear when under the sun for prolonged periods of time. It has small, purple flowers with pink bracts, making it more appealing for pollinators.

Detail

Common name:

-Urn Plant
-Silver Vase Plant

Scientific Name:

Aechmea
fasciata

Family:
Bromelia

Origin / Region: Brazil

AGAPANTHUS AFRICANUS

Ornamental plant of slow flowering and toxic if ingested. It is identified by its small flowers whose colors vary from white to intense sky blue, which grow on a tall stem away from their leaves. Thrives in semi-shadow or direct light environments.

Detail

Common name:

-African Lily
-Lily of the Nile

Scientific Name:

Agapanthus
africanus

Family:
Amaryllidaceae

Origin / Region:

South Africa

AGAVE AMERICANA MARGINATA

Ornamental plant of the agave family. It is characterized by its large size and bluish green leaves with yellow edges. It blooms at the end of its vegetative cycle, creating a large flowering stem that resembles a tree. It lives in arid climates with direct light.

Detail

Common name:

-Variegated
Century Plant

Scientific Name:

Agave americana
marginata

Family:

Asparagaceae

Origin / Region: Mexico
and Southern United States

AGAVE ATTENUATA

Succulent ornamental characterized by its ovate leaves of pale green color without thorns on the edges and being the only one of the genus agave to form a trunk. Quickly adapts to arid climates with sandy or fast-draining soils.

Detail

Common name:

-Foxtail agave
-Lion's tail

Scientific Name:

Agave attenuata

Family:

Asparagaceae

Origin / Region: Mexico
and Southern United States

ALOE ARBORESCENS

Large succulent plant, which can reach up to three meters in height. It is characterized by having long, greyish-green leaves with serrated edges. It is used ornamentally and medicinally. It is a hardy and easy to grow plant in warm climates.

Detail

Common name:

-Candelabra Aloe
-Krantz Aloe

Scientific Name:

Aloe arborescens

Family:

Asphodelaceae

Origin / Region: South Africa,
Malawi, Mozambique and Zimbabwe

ALOE MACULATA

Succulent plant with leaves grouped in rosettes. It is characterized by its reddish green leaves with small white spots distributed in a specific pattern and serrated edges. They bloom once a year with a bouquet of red flowers.

Detail

Common name:

-Soap aloe
-Spotted aloe

Scientific Name:

Aloe maculata

Family:

Asphodelaceae

Origin / Region:

South Africa

ALOYSIA LOOSERI

Large climbing bush, characterized by permanently green leaves and small, highly aromatic white flowers arranged in dense, abundant clusters. It is widely and commonly used for both medicinal and decorative ornamental purposes.

Detail

Common name:

-Ilan Ilan

Scientific Name:

Aloysia
looseri

Family:
Verbenaceae

Origin / Region:

South America

ANTHURIUM SP.

Indoor ornamental plant, recognizable by having very resistant green leaves in the form of a pointed heart and large bracts of intense colors with tiny flowers growing in the shape of an spadix. Requires specific care to grow, such as indirect light and moderate irrigation.

Detail

Common name:

-Flamingo Flower
-Tailflower

Scientific Name:

Anthurium sp.

Family:
Araceae

Origin / Region: Peru,
Colombia, Venezuela

ASPIDISTRA ELATIOR

Medium-sized ornamental plant, characterized by abundant, dense dark green leaves. It is well known for being a very durable and easy-to-grow species, mainly due to its remarkable ability to survive under direct sunlight and with very little water.

Detail

Common name:

-Cast Iron Plant.
-Haran/Baran

Scientific Name:

Aspidistra elatior

Family:

Asparagaceae

Origin / Region: Japan

BOUGAINVILLEA SP.

A vigorous ornamental climbing plant, recognized for its intensely colored bracts that frame discreet white flowers. It is hardy and adaptable to warm climates and is highly valued for its long-lasting flowering and its ornamental and landscape appeal.

Detail

Common name:

-Paper Flower
-Bougainvillea

Scientific Name:

Bougainvillea sp.

Family:

Nyctaginaceae

Origin / Region: Brazil

BRUGMANSIA ARBOREA

Shrub with constant evergreen leaves that can reach from two to ten meters in height under favorable conditions. It is characterized by its striking, colorful, bell-shaped flowers. It is also recognized for its toxicity upon ingestion, potentially producing strong hallucinogenic effects.

Detail

Common name:

-Angel's Trumpet
-Tree Datura

Scientific Name:

Brugmansia
arborea

Family:

Solanaceae

Origin / Region: South
America

CALLISTEMON SP.

Medium-sized shrubs with constant greyish green leaves. It is characterized by its flowers in the form of red spikes that bloom from one to four times a year. Appreciated for its ornamental character and continuous growth.

Detail

Common name:

-Bottlebrush

Scientific Name:

Callistemon

Family:

Myrtaceae

Origin / Region: Australia

CAMPYLONEURUM ANGUSTIFOLIUM

Fern of great frondosity, identifiable by its dark green leaves with undulating shapes and small white spots. Despite being a native of Central America, her name comes from the Quechua "Callawalla" whose meaning is associated with healers and medicine.

Detail

Common name:

-Calaguala

Scientific Name:

Campyloneurum
angustifolium

Family:

Polypodiaceae

Origin / Region: Tropical and subtropical America

CATTLEYA MAXIMA

Ornamental flower of easy cultivation, characterized by its notable flowers with slightly camped shape. Its petals grow sideways, with curly edges, and are usually purple or lavender in color, whereas its pistil is usually yellow or pink.

Detail

Common name:

-Christmas Flower
-Veined Cattleya

Scientific Name:

Cattleya
maxima

Family:

Orquidaceae

Origin / Region:

Peru and Ecuador

CEREUS PERUVIANUS MONSTRUOSUS

A succulent cactus that is easy to cultivate and care for, characterized by its intense blue-green color and rapid, irregular growth that resembles a brain due to its wavy, textured form. It is valued for its ornamental use and durability in arid climates.

Detail

Common name:

-Monstrose
Apple Cactus

Scientific Name:

*Cereus peruvianus
monstruosus*

Family:

Cactaceae

Origin / Region:

Peru and Brazil

CESTRUM NOCTURNUM

Ornamental bush, appreciated for the fragrance of its flowers. Its leaves are semi-permanent, light green and oval in shape. It has small white or yellow flowers, which grow in numerous clusters and open at night to emit their aroma.

Detail

Common name:

-Night-blooming
Jasmine

Scientific Name:

Cestrum
nocturnum

Family:
Solanaceae

Origin / Region: Tropical
and subtropical America

CHAMAEDOREA SEIFRIZII

Indoor ornamental palm, whose stems grow in the form of bamboo rods, with slender and long yellowish green leaves. This species was cultivated by the Maya ornamentally, although it is thought that they could also be used for religious purposes.

Detail

Common name:

-Bamboo palm
-Reed palm

Scientific Name:

Chamaedorea
seifrizii

Family:

Arecaceae

Origin / Region: Mexico,
Honduras, Belize and Guatemala

CHLOROPHYTUM COMOSUM

Ornamental type evergreen ornamental plant, characterized by its long and thin light green leaves with a white or yellow stripe in the middle, which hang down in the form of ferns. This plant is valued for its easy propagation and simple care.

Detail

Common name:

-Spider Plant
-Ribbon plant

Scientific Name:

Chlorophytum
comosum

Family:

Agavaceae

Origin / Region:

Sub-Saharan Africa

CLEISTOCACTUS WINTERI

Succulent plant that grows as a bush, characterized by its green hanging stems that branch at the base. It is covered with small soft golden yellow spines, which resemble the coat of a monkey, reason for its name.

Detail

Common name:

-Golden rat-tail cactus

Scientific Name:

Cleistocactus winteri

Family:
Cactaceae

Origin / Region: Bolivia

CLIVIA MINIATA

Ornamental plant known for its long, flat, dark green leaves and large orange flowers that grow on the outside of a stem. Blooms in late winter and early spring. It is used to decorate gardens due to its durability and annual flowering.

Detail

Common name:

-Bush lily
-Clivia

Scientific Name:

Clivia
miniata

Family:
Amaryllidaceae

Origin / Region:
South Africa

COCCOLOBA UVIFERA

Medium-sized woody tree. Its leaves are light green and have a rounded shape with pink ribbing. At the end of summer this tree produces small fruits in the form of grapes, however, it is not related to this fruit.

Detail

Common name:

-Sea grape
-Platter leaf

Scientific Name:

Coccoloba
uvifera

Family:

Polygonaceae

Origin / Region:

The Caribbean

CRASSULA OVATA

Succulent plant characterized by its thick branches and fleshy jade green leaves growing in opposite pairs along the stem. It is appreciated for its ornamental characteristic and is considered a lucky tree in the Chinese culture.

Detail

Common name:

-Jade Plant
-Lucky plant

Scientific Name:

Crassula
ovata

Family:
Crassulaceae

Origin / Region: South
Africa and Mozambique

DIEFFENBACHIA SEGUINE

Ornamental plant whose leaves are kept constantly green. It is characterized by having a thick, upright stem from which sprout long pale green leaves with dark edges. It is used to decorate spaces with low light and high humidity.

Detail

Common name:

-Tuftroot
-Dumb cane

Scientific Name:

Dieffenbachia
seguine

Family:
Araceae

Origin / Region: Mexico
and The Caribbean

DURANTA ERECTA

Ornamental herbaceous shrub of large foliage, characterized by its opposite leaves with elliptical shape. It has purple and blue flowers, which bloom during the summer and transform into yellow or orange fruits. It is appreciated for its rapid growth under direct light.

Detail

**Common name:**

-Golden dewdrop
-Pigeon berry

**Scientific Name:**

Duranta
erecta

**Family:**

Verbenaceae

Origin / Region: Tropical and subtropical America

ECHEVERIA

LAUI

Succulent plant known for its fleshy leaves, which grow in the form of rosettes and can measure up to 30cm long. The leaves are usually a whitish green or reddish with rounded shape. Used ornamentally and is appreciated for its easy reproduction.

Detail

Common name:

-Lau
-Lau's echeveria

Scientific Name:

Echeveria
laui

Family:

Crassulaceae

Origin / Region: Mexico

ECHEVERIA PULVINATA

Succulent plant of small size, characterized by its thick leaves in the form of a green drop and reddish edges, covered with fur. It is especially used ornamentally due to its low maintenance and appeal.

Detail

Common name:

-Chenille plant
-Plush plant

Scientific Name:

Echeveria
pulvinata

Family:
Crassulaceae

Origin / Region: Mexico

ECHINOOPSIS PACHANOI

Large succulent plant with rapid propagation and growth. It is an arborescent cactus that grows in large clusters of erect stems, which resemble a star to the cut. It was used in ancient Peru due to its hallucinogenic abilities.

Detail

Common name:

-San Pedro
-Andean cactus

Scientific Name:

Echinopsis
pachanoi

Family:

Cactaceae

Origin / Region: Peru

EPIDENDRUM IBAGUENSE

Ornamental flower characterized by the growth of its flowers, in a large cluster of grouped form which sprouts from a large pendulum. Its flowers can be orange, violet or yellow. Their resistance and constant flowering make it ideal for landscape uses.

Detail

Common name:

-Crucifix orchid
-Fire star orchid

Scientific Name:

Epidendrum
ibaguense

Family:

Orquidaceae

Origin / Region: Tropical and subtropical America

EUPHORBIA CANDELABRUM

Succulent plant characterized by its columnar growth. Its stems are intense green and resemble a chandelier, the reason for its name. Its bark is thin and has a star shape. It is appreciated as an ornamental plant for its high strength and size.

Detail

Common name:

-Candelabra tree
-Tree euphorbia

Scientific Name:

Euphorbia
candelabrum

Family:

Euphorbiaceae

Origin / Region: Ethiopia,
Sudan, Kenya and Uganda

EUPHORBIA LACTEA CRISTATA

Succulent ornamental plant, recognized for its green crest shape with brown or reddish endings, which creates a wavy fan, similar to a necklace or a dragon crest. It is appreciated for its decorative feature due to its exotic shape and easy care.

Detail

Common name:

-Coral cactus
-False cactus

Scientific Name:

Euphorbia lactea cristata

Family:

Euphorbiceae

Origin / Region: India and Sri Lanka

EUPHORBIA MILII

SPLENDENS

Medium-sized ornamental shrub. Its stems end in a rosette of leaves, and its spikes, straight and thin up to 3 cm long, help it climb other plants. Its flowers are blood-red. Its name comes from the association with the crown that Jesus Christ wore during his crucifixion.

Detail

Common name:

-Crown of thorns

Scientific Name:

Euphorbia milii splendens

Family:

Euphorbiaceae

Origin / Region:

Madagascar

HIPPEASTRUM SP.

Medium-sized ornamental plant, characterized by its large, showy trumpet-shaped flowers, which arise from a thick central stem culminating in long leaves that resemble elegant ribbons. It is highly valued for the beauty of its flowers and its remarkable longevity.

Detail

Common name:
-Amaryllis

Scientific Name:
Hippeastrum

Family:
Amaryllidaceae

Origin / Region: Tropical and subtropical America

MONSTERA DELICIOSA

Ornamental climbing plant, characterized by its thick stems and large oval green leaves that split as if they were ribs, generated so that the whole plant can acquire light. The structure of its leaves is the reason for its name.

Detail

Common name:

-Swiss cheese plant

Scientific Name:

Monstera
deliciosa

Family:
Araceae

Origin / Region:

Amazon Rainforest

MURRAYA PANICULATA

Small tropical tree whose leaves are kept constantly green. It is known for its white flowers, which produce a sweet aroma during the night. It stands out not only for its aroma, but also for its constant flowering, making it ideal for landscaping.

Detail

Common name:

-Orange jasmine
-Mock orange

Scientific Name:

Murraya
paniculata

Family:

Rutaceae

Origin / Region:

South East Asia

NEPHROLEPIS PENDULA

Large ferns, characterized by their long green fronds falling in a cascade. Its leaves are thin and crested, which makes it different from other ferns. It is used ornamentally, decorating environments with hanging pots.

Detail

Common name:

-Weeping sword fern

Scientific Name:

Nephrolepis pendula

Family:

Polypodiaceae

Origin / Region: Tropical South America

OLEA EUROPAEA

Medium tree with thick trunk. It is characterized by its grey-brown bark with oval leaves silver green on the front and dark green on the obverse. This tree produces fruits known as olive trees or olives, which sprout in autumn.

Detail

Common name:

- Olive tree
- European olive

Scientific Name:

Olea europaea

Family:

Oleaceae

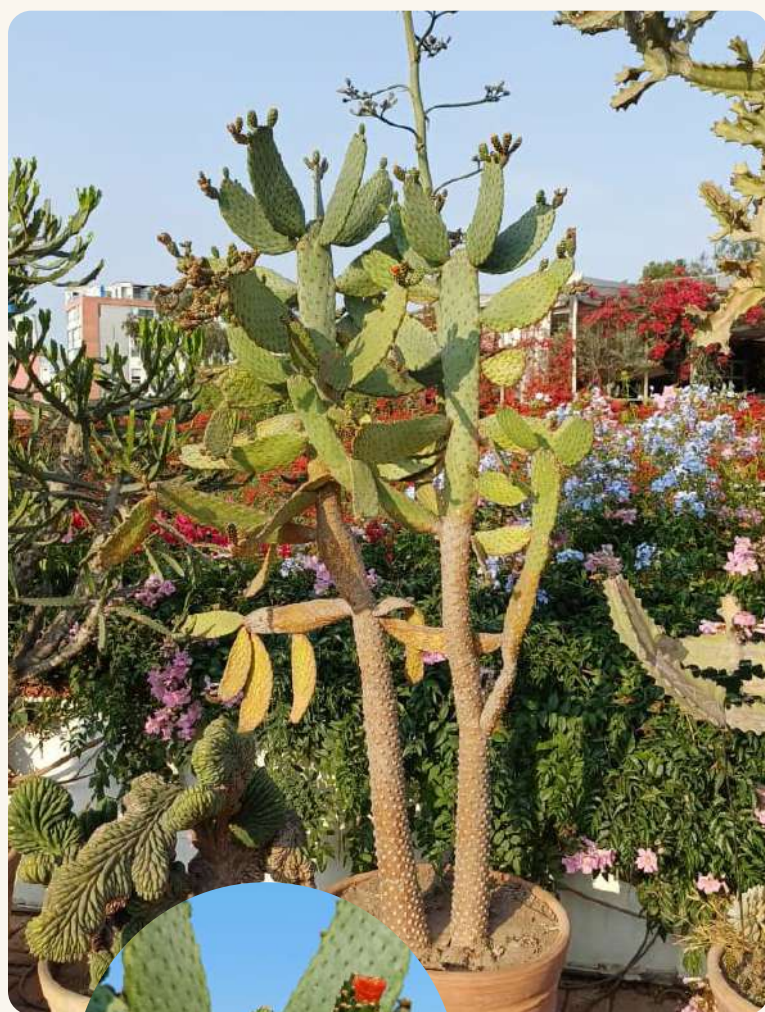

Origin / Region:

Mediterranean countries

OPUNTIA TOMENTOSA

Shrub cactus characterized by its woody trunk and its stalks or cladodes of oval shape and green color, which are covered with a fine white fur and thin spines. Its flowers are reddish-yellow and give rise to an edible fruit known as "Tuna".

Detail

Common name:

- Velvety tree pear
- Velvet opuntia

Scientific Name:

Opuntia
tomentosa

Family:
Cactaceae

Origin / Region: Mexico
and Nicaragua

PELARGONIUM HORTORUM

Ornamental plant recognized for its rounded leaves, covered with a light fluff, giving them a dark green color. Their flowers grow in clusters of vibrant colors and are present throughout the year. Their flowering along with easy care makes them ideal for landscaping.

Detail

Common name:

-Zonal geranium
-Fish geranium

Scientific Name:

Pelargonium
hortorum

Family:

Geranlaceae

Origin / Region:

South Africa

PELARGONIUM PELTATUM

Ornamental ivy climbing through the vegetation growing around it. It is characterized by its dark-colored rounded leaves and flowers, which grow in the form of clusters in vivid colors. They are highly appreciated for their ornamental use and easy care.

Detail

**Common name:**

- Ivy geranium
- Cascading geranium

**Scientific Name:**

Pelargonium peltatum

**Family:**

Geranlaceae

**Origin / Region:**

South Africa

PHALAENOPSIS SCHILLERIANA

Ornamental flower characterized by its elegant petals that grow parallel around its labellum, assimilating the shape of a butterfly. The color of their flowers, and the fact that they are shade plants, make them ideal for decorating spaces with low light.

Detail

Common name:

-Schiller's moth orchid

Scientific Name:

Phalaenopsis schilleriana

Family:

Orchidaceae

Origin / Region:

The Philippines

PHILODENDRON GIGANTEUM

Fast-growing climbing plant, widely known for its large, bright green leaves that can reach up to one meter in length. It is highly valued as an indoor ornamental plant due to its impressive size and relatively easy overall maintenance requirements.

Detail

Common name:

-Elephant ear
-Chinny leaf

Scientific Name:

Philodendron
giganteum

Family:
Araceae

Origin / Region: Tropical
and subtropical America

PHLEBODIUM AUREUM

Large ornamental fern widely appreciated for its broad, gracefully swayed fronds, which vary in shades from deep dark green or bluish tones to soft silver hues. Their distinctive shape and elegant coloration make them especially ideal plants for decorating interior spaces.

Detail

Common name:

-Blue star fern
-Gold-foot fern

Scientific Name:

Phlebodium
aureum

Family:

Polypodiaceae

Origin / Region: Tropical and subtropical America

PHYLLOSTACHYS AUREA

Edible plant characterized by the large size it can reach under certain conditions (up to 22m) and its rapid growth. They are green rods with yellow hues. Their leaves have a linear shape and share the color of their rods.

Detail

Common name:

-Golden bamboo
-Fishpole bamboo

Scientific Name:

Phyllostachys aurea

Family:
Poaceae

Origin / Region: China

PITTOSPORUM TOBIRA

Medium-sized, fast-growing bush whose sturdy leaves consistently maintain an intense, vibrant green color throughout the year. It produces small yellow flowers that emanate a pleasant, sweet aroma, making it a highly appreciated and popular plant in landscape design.

Detail

Common name:

-Japanese mock orange
-Toriba

Scientific Name:

Pittosporum
tobira

Family:

Pittosporaceae

Origin / Region: China,
Korea and Japan

PLECTRANTHUS VERTICILLATUS

Hanging ivy characterized by its round and toothed leaves, which have an intense green color. They are quite hardy and easy to care for, so they are used as decoration in indoor areas. It is also believed that this plant attracts good luck.

Detail

Common name:

-Swedish ivy
-Money plant

Scientific Name:

Plectranthus
verticillatus

Family:
Lamiaceae

Origin / Region: South Africa,
Eswatini, Mozambique

PLUMBAGO AURICULATA

Large shrub. It is characterized by its constantly green leaves and flowers, which grow in spherical clusters and are lavender or soft blue. Their flowering is also constant, which, together with their easy care, makes them ideal for decorating gardens.

Detail

**Common name:**

-Blue plumbago
-Cape leadwort

**Scientific Name:**

Plumbago
auriculata

**Family:**

Plumbaginaceae

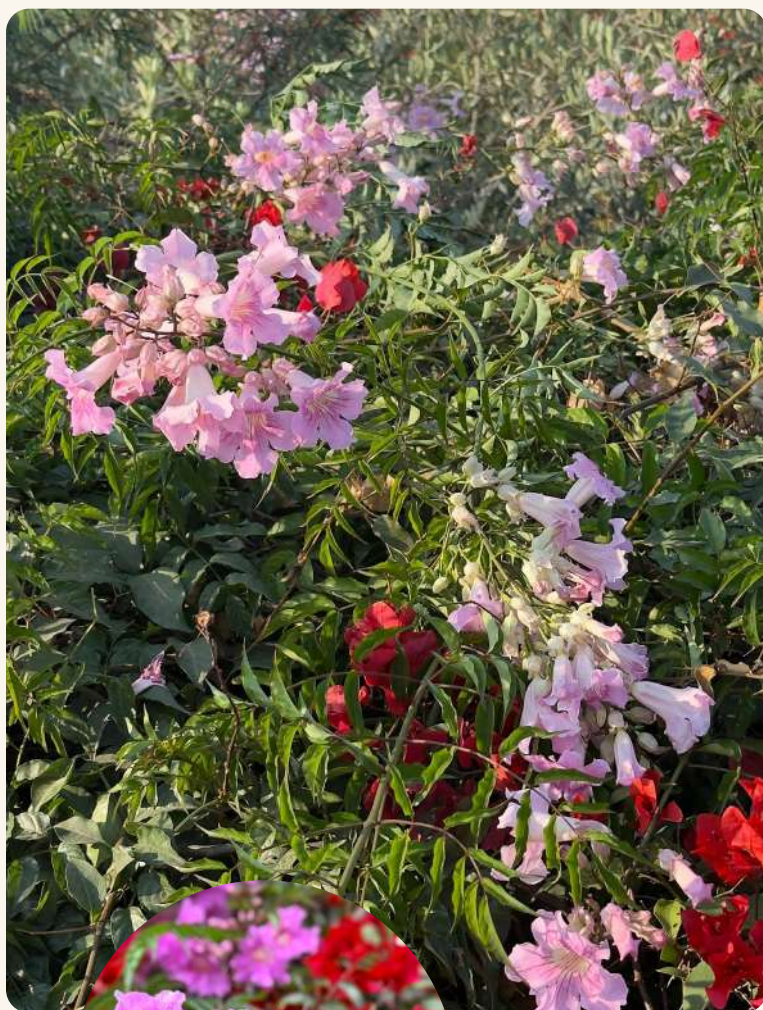

**Origin / Region:**

South Africa

PODRANEA RICASOLIANA

Fast-growing vine. Recognized for its slightly crested leaves. Its flowers are trumpet-shaped with a light pink color towards the edges and more intense on the inside. Together with their ornamental characteristic, these plants emit a slight sweet aroma.

Detail

Common name:

-Pink trumpet vine
-Bubblegum vine

Scientific Name:

Podranea
ricasoliana

Family:
Bignonaceae

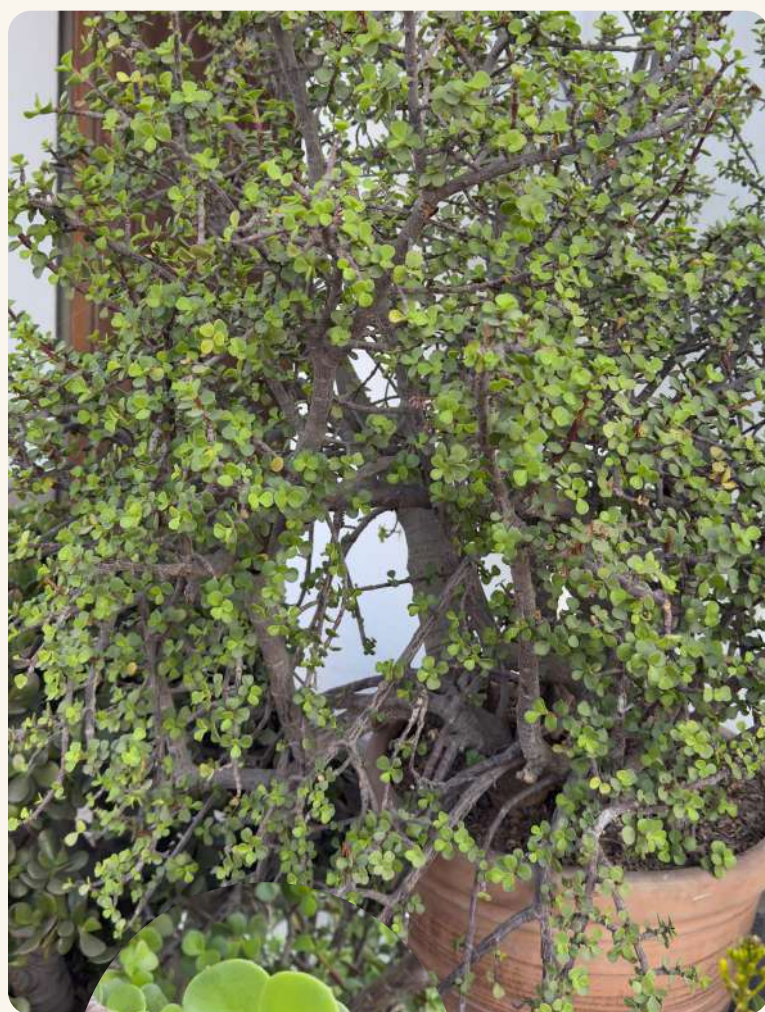

Origin / Region:
South Africa

PORTULACARIA AFRA

Succulent-type shrub, characterized by its oval leaves, small yet thick and fleshy, growing in neat parallel pairs along the stems. It has a reddish-brown ligneous trunk that resembles that of a small tree as it matures, making it especially ideal for bonsai cultivation.

Detail

Common name:

-Elephant bush
-Dwarf jade

Scientific Name:

Portulacaria
afra

Family:

Didiereaceae

Origin / Region: South Africa,
Mozambique, Kenya, Tanzania

RHAPIS EXCELSA

Small-sized ornamental palm, characterized by its slender, dark green fronds that can reach up to 40 cm in length. Its rapid adaptability to different environments and steady growth rate make it an ideal and highly versatile plant for landscaping purposes.

Detail

Common name:

-Lady palm
-Bamboo palm

Scientific Name:

Rhaps excelsa

Family:

Areaceae

Origin / Region: China

SPATHIPHYLLUM SP.

Indoor ornamental plant, known for its lush leafy, deep green oval leaves with flowers growing in the shape of a beak, surrounded by a brace resembling a crib. Their easy care and ability to improve air quality enhance them for space decoration.

Detail

Common name:

-Peace lily
-Spathe flower

Scientific Name:

Spathiphyllum
sp.

Family:
Araceae

Origin / Region: Tropical
and subtropical America

SYNGONIUM SP.

Easy-care ornamental climbing plant, characterized by its leaves. When they are young, these have an arrow or heart shape, and as they mature, they take on a lobular form. Its colors vary from yellowish green to white, cream or pink. It is easy to care for.

Detail

Common name:

- Arrowhead vine
- Goosefoot plant

Scientific Name:

Syngonium sp.

Family:

Araceae

Origin / Region: Tropical South America

YUCCA GLORIOSA

Small shrub with short stem. It is characterized by its bluish-green leaves, with elongated shape and point ending (simulating a sword or dagger) and are arranged in a spiral around the stem. This plant is used ornamentally in dry places.

Detail

Common name:

-Spanish dagger
-Moundlily yucca

Scientific Name:

Yucca gloriosa

Family:

Asparagaceae

Origin / Region:

Peru and Chile
